

NO 10 SORBACT® CLINICAL CASE

Eczema and blistering on feet and lower legs

WOUND TYPE

Superficial skin breakdown and blistering

PRODUCT

Sorbact® Surgical Dressing

COUNTRY/LOCATION

DK - Fredensborg Municipality

TREATMENT PERIOD

18 October – 12 November, 2009

THE PATIENT

A woman with eczema and blistering on the feet and lower legs.

PREVIOUS TREATMENT

Sorbact® Surgical Dressing were used on the blisters. The dressings were changed every second day. The blisters healed in 2 – 3 days.

The skin surrounding the blisters have since the 3rd of November, 2009 been treated with a hormone cream.

There are two photos showing feet and legs before treatment (taken the 18th of October, 2009) and two photos (taken the 12th of November, 2009) which show the result after 3 days of management with Sorbact® Surgical Dressing.
