

NO 25 SORBACT® CLINICAL CASE

Diabetic foot ulcer

WOUND TYPE

Diabetic foot ulcer

PRODUCT

Sorbact®

COUNTRY/LOCATION

USA

TREATMENT PERIOD

2 November 2011 – 15 March 2012

THE PATIENT

75 year old male.

Type-II diabetes (on insulin), treated hypertension, treated deep vein thrombosis, treated hyperlipidemia.

THE TREATMENT

Wound located on left foot as a result of an amputation of the great toe.

Bone was still exposed in the base of the amputation site after 6 weeks of traditional care. Sorbact® was applied to the wound. Rapid healing was noted at routine visit of 3 weeks. Complete wound closure and healing with 8 weeks of Sorbact® treatment.
